**Professional Elective/Open Elective Course:** These are the ONLINE courses suggested by the respective Board of Studies

**Online Professional Course:** The students need to register (anywhere between VI to VIII Semesters) NPTEL Course of 12 weeks duration (3 Credits course) and should pass the examination. The NPTEL Courses relevant to the program and need to be identified by the department and same is to be informed to the students.

**Online Open Elective Course:** The students need to register (anywhere between VI to VIII Semesters) NPTEL Course of 12 weeks duration (3 Credits course) and should pass the examination. The NPTEL Courses that enables skill enhancements and job opportunities need to be suggested by the department and same is to be informed to the students.

| Big Data Analytics  |                                   |                 |
|---|-----------------------------------|-----------------|
| Course Code   | 22AI71                            | CIE: 50         |
| Credits   | 04                                | SEE: 50         |
| Course Type   | IPCC                              |                 |
| Number of Lecture Hours/Week (L-T-P)  | 3-0-2                             | Total Marks:100 |
| Total Number of Lecture Hours   | 52 Hours (40:Theory+12:Practical) | SEE Hours: 03   |
| <b>Course Objectives:</b> <ul style="list-style-type: none"> <li>• To understand the concepts of big data and hadoop</li> <li>• To understand MapReduce concepts</li> <li>• To perform data analysis with pig tool and to perform high volume ingestion into Hadoop of event based data</li> <li>• To create and load data into HIVE tables</li> <li>• To create resilient distributed datasets</li> </ul>  |                                   |                 |
| Modules   |                                   | Teaching Hours  |
| <b>Module-I</b><br>Big Data: characteristics of big data, Applications of Big Data, comparison with other systems, data analysis with Hadoop, scaling out, data flow, combiner functions, Hadoop streaming. HDFS, Design of HDFS, HDFS concepts-blocks, name node and data node, clock caching, HDFS federation, HDFS high availability, failover and fencing, the command line interface, Basic file system operations, Hadoop filesystems, Data flow, Anatomy of a file write, Parallel Copying with distcp, Keeping an HDFS Cluster Balanced |                                   | 08              |
| <b>Module-II</b><br>YARN: Anatomy of a YARN Application Run, resource requests, application lifespan, YARN Compared to MapReduce 1, Scheduling in YARN, scheduler options, Anatomy of a MapReduce Job Run.  |                                   | 08              |
| <b>Module-III</b><br>Pig: Comparison with Databases, Pig Latin-Structure, Statements, Expressions, Types, Schemas, Functions, Macros, User-Defined Functions- A Filter UDF, An Eval UDF, A Load UDF; Data Processing Operators- Loading and Storing Data, Filtering Data, Grouping and Joining Data, Sorting Data, Combining and Splitting Data, Pig in Practice Parallelism, Anonymous Relations, Parameter Substitution Flume: working with flume, Transactions and Reliability, The HDFS Sink, Fan Out, Distribution.                        |                                   | 08              |
| <b>Module-IV</b><br>Hive: HiveQL- Data Types, Operators and Functions, Tables-Managed Tables and External Tables, Partitions and Buckets, Storage Formats, Importing Data, Altering Tables, Dropping Tables, Querying Data- Sorting and Aggregating, MapReduce Scripts, Joins, Sub queries, Views User-Defined Functions, Partitioning -static and dynamic Sqoop: Sqoop Connectors, import, generated code, Working with Imported Data, Exports   |                                   | 08              |

|  |    |
|--|----|
|  |    |
| <p style="text-align: center;"><b>Module-V</b></p> <p>Spark: Resilient Distributed Datasets- Creation, Transformations and Actions, Persistence, Serialization, Shared Variables, Anatomy of a Spark Job Run--Job Submission, DAG Construction, Task Scheduling, Task Execution; Executors and Cluster Managers HBase: HBasics, Concepts, HBase Versus RDBMS, Building an Online Query Application</p> | 08 |

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- Each full question will have sub questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

Tom White, "Hadoop: The Definitive Guide: Storage and Analysis at Internet Scale", 4/e, O'Reilly

**Reference Books:**

Seema Acharya, Subhashini Chellappan, "Big Data and Analytics", Wiley India Pvt. Ltd

**Course outcomes: On completion of the course, the student will have the ability to:**

| Course Code   | CO#        | Course Outcome(CO)                       |
|---------------|------------|--|
| <b>22AI71</b> | <b>CO1</b> | Work with hadoop distributed file system |
|               | <b>CO2</b> | Develop map reduce based applications    |
|               | <b>CO3</b> | Perform data analysis using pig tool     |
|               | <b>CO4</b> | To use hive tool for data analysis       |
|               | <b>CO5</b> | Big Data processing using SPARK          |

**Practical Component of IPCC**

| List of Experiments |   |
|---------------------|---|
| 1                   | <p>Implement the following file management tasks in Hadoop:</p> <ol style="list-style-type: none"> <li>Adding files and directories</li> <li>Retrieving files</li> <li>Deleting files</li> </ol> <p>Hint: A typical Hadoop workflow creates data files (such as log files) elsewhere and copies them into HTFS using one of the above command line utilities.</p> |
| 2                   | Develop a MapReduce program to implement matrix multiplication.   |
| 3                   | Develop a MapReduce program that mines whether data and displays appropriate messages indicating the weather conditions of the  |

|   |  |
|---|--|
|   | day.   |
| 4 | Develop a MapReduce program to find the tags associated with each movie by analyzing movie lens data.                                |
| 5 | Implement Functions: Count – Sort – Limit – Skip – Aggregate using MongoDB.  |
| 6 | Write Pig Latin scripts to sort, group, join , project, and filter the data.   |
| 7 | Use Hive to create, alter, and drop databases, tables, views, functions and indexes.   |
| 8 | Implement a word count program in Hadoop and Spark.  |
| 9 | Use CDH (Cloudera Distribution for Hadoop) and HUE (Hadoop User Interface) to analyze data and generate reports for sample datasets. |

| Natural Language Processing   |                                   |                 |
|---|-----------------------------------|-----------------|
| Course Code   | 22AI72                            | CIE: 50         |
| Credits   | 04                                | SEE: 50         |
| Course Type   | IPCC                              |                 |
| Number of Lecture Hours/Week (L-T-P)  | 3-0-2                             | Total Marks:100 |
| Total Number of Lecture Hours   | 52 Hours (40:Theory+12:Practical) | SEE Hours: 03   |
| <b>Course Objectives:</b> <ul style="list-style-type: none"> <li>• Learn the importance of natural language modeling</li> <li>• Understand the applications of natural language processing</li> <li>• Study spelling, error detection and correction methods and parsing techniques in NLP</li> <li>• Illustrate the information retrieval models in natural language processing</li> </ul> |                                   |                 |
| Modules   |                                   | Teaching Hours  |
| <b>Module-I</b><br>Introduction: What is Natural Language Processing? Origins of NLP, Language and Knowledge, The Challenges of NLP, Language and Grammar, Processing Indian Languages, NLP Applications. Language Modeling: Statistical Language Model - N-gram model (unigram, bigram), Paninion Framework, Karaka theory.  |                                   | 08              |
| <b>Module-II</b><br>Word Level Analysis: Regular Expressions, Finite-State Automata, Morphological Parsing, Spelling Error Detection and Correction, Words and Word Classes, Part-of Speech Tagging. Syntactic Analysis: Context-Free Grammar, Constituency, Top-down and Bottom-up Parsing, CYK Parsing.   |                                   | 08              |
| <b>Module-III</b><br>Naive Bayes, Text Classification and Sentiment: Naive Bayes Classifiers, Training the Naive Bayes Classifier, Worked Example, Optimizing for Sentiment Analysis, Naive Bayes for Other Text Classification Tasks, Naive Bayes as a Language Model.   |                                   | 08              |
| <b>Module-IV</b><br>Information Retrieval: Design Features of Information Retrieval Systems, Information Retrieval Models - Classical, Non-classical, Alternative Models of Information Retrieval - Custer model, Fuzzy model, LSTM model, Major Issues in Information Retrieval. Lexical Resources: WordNet, FrameNet, Stemmers, Parts-of-Speech Tagger, Research Corpora.                 |                                   | 08              |
| <b>Module-V</b><br>Machine Translation: Language Divergences and Typology, Machine Translation using Encoder-Decoder, Details of the Encoder-Decoder Model, Translating in Low-Resource Situations, MT Evaluation, Bias and Ethical Issues.   |                                   | 08              |

| Course Code  | CO#        | Course Outcome(CO)  |
| <b>22AI73</b>  | <b>CO1</b> | Apply the fundamental concept of NLP, grammar-based language model and statistical-based language model           |
|  | <b>CO2</b> | Explain morphological analysis and different parsing approaches.  |
|  | <b>CO3</b> | Develop the Naïve Bayes classifier and sentiment analysis for Natural language problems and text classifications. |
|  | <b>CO4</b> | Apply the concepts of information retrieval, lexical semantics, lexical dictionaries.                             |
|  | <b>CO5</b> | Identify the Machine Translation applications of NLP using Encode and Decoder.                                    |

### Practical Component of IPCC

| List of Experiments |  |
|---------------------|--|
| 01                  | Write a Python program for the following preprocessing of text in NLP: <ul style="list-style-type: none"> <li>Tokenization</li> <li>Filtration</li> <li>Script Validation</li> <li>Stop Word Removal</li> <li>Stemming</li> </ul>  |
| 02                  | Demonstrate the N-gram modeling to analyze and establish the probability distribution across sentences and explore the utilization of unigrams, bigrams, and trigrams in diverse English sentences to illustrate the impact of varying n-gram orders on the calculated probabilities |

|    |   |
|----|---|
| 03 | <p>Investigate the Minimum Edit Distance (MED) algorithm and its application in string comparison and the goal is to understand how the algorithm efficiently computes the minimum number of edit operations required to transform one string into another.</p> <ul style="list-style-type: none"> <li>• Test the algorithm on strings with different type of variations (e.g., typos, substitutions, insertions, deletions)</li> <li>• Evaluate its adaptability to different types of input variations</li> </ul>                       |
| 04 | Write a program to implement top-down and bottom-up parser using appropriate context free grammar.  |
| 05 | <p>Given the following short movie reviews, each labeled with a genre, either comedy or action:</p> <ul style="list-style-type: none"> <li>• fun, couple, love, love comedy</li> <li>• fast, furious, shoot action</li> <li>• couple, fly, fast, fun, fun comedy</li> <li>• furious, shoot, shoot, fun action</li> <li>• fly, fast, shoot, love action and A new document D: fast, couple, shoot, fly</li> </ul> <p>Compute the most likely class for D. Assume a Naive Bayes classifier and use add-1 smoothing for the likelihoods.</p> |
| 06 | <p>Demonstrate the following using appropriate programming tool which illustrates the use of information retrieval in NLP:</p> <ul style="list-style-type: none"> <li>• Create and use your own corpora (plaintext, categorical)</li> <li>• Study Conditional frequency distributions</li> <li>• Write a program to find the most frequent noun tags</li> <li>• Map Words to Properties Using Python Dictionaries</li> </ul>  |
| 07 | Write a Python program to find synonyms and antonyms of the word "active" using WordNet   |
| 08 | Implement the machine translation application of NLP where it needs to train a machine translation model for a language with limited parallel corpora. Investigate and incorporate techniques to improve performance in low-resource scenarios.   |

| <b>Module-II</b><br>Basics of Supervised Deep Learning Introduction, Convolution Neural Network, Evolution of Convolution Neural Network, Architecture of CNN, Convolution Operation   |                   | 08              |
| <b>Module-III</b><br>Training Supervised Deep Learning Networks Training Convolution Neural Networks, Gradient Descent-Based Optimization Techniques, Challenges in Training Deep Networks. Supervised Deep Learning Architectures: LetNet-5,AlexNet   |                   | 08              |
| <b>Module-IV</b><br>Recurrent and Recursive Neural Networks Unfolding Computational Graphs, Recurrent Neural Network, Bidirectional RNNs, Deep Recurrent Networks, Recursive Neural Networks, The Long Short-Term Memory, Gated RNNs.  |                   | 08              |
| <b>Module-V</b><br>Deep Reinforcement Learning: Introduction, Stateless Algorithms: Multi-Armed Bandits, The Basic Framework of Reinforcement Learning, case studies.  |                   | 08              |

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- Each full question will have sub questions covering all the topics under a module. The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. M. Arif Wani Farooq Ahmad Bhat Saduf Afzal Asif Iqbal Khan, Advances in Deep Learning, Springer, 2020
2. Ian Goodfellow, Yoshua Bengio, Aaron Courville, "Deep Learning", MIT Press, 2016.
3. Charu C. Aggarwal, "Neural Networks and Deep Learning", Springer, 2018.

**Reference Books:**

1. Bengio, Yoshua. "Learning deep architectures for AI." Foundations and trends in Machine Learning, 2009
2. N.D. Lewis, "Deep Learning Made Easy with R: A Gentle Introduction for Data Science", January 2016
3. Nikhil Buduma, "Fundamentals of Deep Learning: Designing Next-Generation Machine Intelligence Algorithms", O'Reilly publications

Course outcomes: On completion of the course, the student will have the ability to:

| Course Code | CO# | Course Outcome(CO)   |
|-------------|-----|--|
| 22AI744     | CO1 | Demonstrate the implementation of deep learning techniques.  |
|             | CO2 | Examine various deep learning techniques for solving the real world problems.                              |
|             | CO3 | Design and implement research-oriented scenario using deep learning techniques in a team.                  |
|             | CO4 | Examine the limitations of standard RNNs and how LSTM and Gated RNN architectures address them.            |
|             | CO5 | Demonstrate practical understanding by implementing simple RL algorithms and evaluating their performance. |

| Software Engineering and Project Management   |                   |                 |
|---|-------------------|-----------------|
| Course Code   | 22AIOE751         | CIE: 50         |

| Course Type   | OEC - II          |                 |
| Number of Lecture Hours/Week (L-T-P)  | 3-0-0             | Total Marks:100 |
| Total Number of Lecture Hours   | 42 Hours (Theory) | SEE Hours: 03   |
| <b>Course Objectives:</b> <ul style="list-style-type: none"> <li>Outline software engineering principles and activities involved in building large software programs. Identify ethical and professional issues and explain why they are of concern to Software Engineers.</li> <li>Describe the process of requirement gathering, requirement classification, requirement specification and requirements validation.</li> <li>Recognize the importance of Project Management with its methods and methodologies.</li> <li>Identify software quality parameters and quantify software using measurements and metrics. List software quality standards and outline the practices involved.</li> </ul> |                   |                 |
| Modules   |                   | Teaching Hours  |
| <b>Module-I</b><br>Software and Software Engineering: The nature of Software, The unique nature of WebApps, Software Engineering, The software Process, Software Engineering Practice, Software Myths. Process Models: A generic process model, Process assessment and improvement, Prescriptive process models: Waterfall model, Incremental process models, Evolutionary process models, Concurrent models, Specialized process models. Unified Process , Personal and Team process models  |                   | 10              |
| <b>Module-II</b><br>Understanding Requirements: Requirements Engineering, Establishing the ground work, Eliciting Requirements, Developing use cases, Building the requirements model, Negotiating Requirements, Validating Requirements. Requirements Modeling Scenarios, Information and Analysis classes: Requirement Analysis, Scenario based modeling, UML models that supplement the Use Case, Data modeling Concepts, Class-Based Modeling. Requirement Modeling Strategies : Flow oriented Modeling , Behavioral Modeling.  |                   | 08              |
| <b>Module-III</b><br>Agile Development: What is Agility?, Agility and the cost of change. What is an agile Process?, Extreme Programming (XP), Other Agile Process Models, A tool set for Agile process . Principles that guide practice: Software Engineering Knowledge, Core principles, Principles that guide each framework activity.   |                   | 08              |

|   |            |  |
|---|------------|--|
| <b>Module-IV</b>  |            | 08   |
| Introduction to Project Management: Introduction, Project and Importance of Project Management, Contract Management, Activities Covered by Software Project Management, Plans, Methods and Methodologies, Some ways of categorizing Software Projects, Stakeholders, Setting Objectives, Business Case, Project Success and Failure, Management and Management Control, Project Management life cycle, Traditional versus Modern Project Management Practices. Project Evaluation: Evaluation of Individual projects, Cost–benefit Evaluation Techniques, Risk Evaluation |            |  |
| <b>Module-V</b>   |            | 08   |
| Software Quality: Introduction, The place of software quality in project planning, Importance of software quality, Defining software quality, Software quality models, product versus process quality management. Software Project Estimation: Observations on Estimation, Decomposition Techniques, Empirical Estimation Models.   |            |  |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>The question paper will have ten questions.</li> <li>Each full question consists of 20 marks.</li> <li>Each full question will have sub questions covering all the topics under a module. | <b>Course outcomes: On completion of the course, the student will have the ability to:</b>  |            |  |
| <b>Course Code</b>  | <b>CO#</b> | <b>Course Outcome(CO)</b>  |
| <b>22AIOE751</b>  | <b>CO1</b> | Differentiate process models to judge which process model has to be adopted for the given scenarios. |
|   | <b>CO2</b> | Derive both functional and nonfunctional requirements from the case study                            |
|   | <b>CO3</b> | Analyze the importance of various software testing methods and agile methodology                     |
|   | <b>CO4</b> | Illustrate the role of project planning and quality management in software development.              |
|   | <b>CO5</b> | Identify appropriate techniques to enhance software quality.   |

| Major Project Phase - II   |                      |  |
|--|----------------------|--|
| Course Code  | 22AIP76              | CIE: 50  |
| Credits  | 06                   | SEE: 50  |
| Course Type  | PROJ                 |  |
| Number of Lecture Hours/Week (L-T-P)   | 0-0-12               | Total Marks:100  |
| Total Number of Lecture Hours  | 24 Hours (Practical) | SEE Hours: 03  |
| <b>Course Objectives:</b> <ul style="list-style-type: none"> <li>• Gain and revise the knowledge of contemporary issues through literature surveys.</li> <li>• Design and implement the solution for real world problems.</li> <li>• To apply programming skills for module implementation.</li> <li>• Apply modern technologies and engineering tools.</li> <li>• To enhance the project management skills.</li> <li>• Work individually and as a team member in multidisciplinary domains with ethical standards.</li> </ul> |                      |  |
| <b>Course outcomes: On completion of the course, the student will have the ability to:</b>   |                      |  |
| Course Code  | CO#                  | Course Outcome(CO)   |
| 22AIP76  | CO1                  | Apply the basic engineering knowledge and identify the real world problem.                     |
|  | CO2                  | Apply the engineering skills to solve problems which require engineering applications.         |
|  | CO3                  | Gain insights and evaluate the knowledge through literature survey and formulate the problems. |
|  | CO4                  | Design and develop effective solution to the problem using software methodology.               |
|  | CO5                  | Prepare a well organized report and presentation.  |

| Internship (Industry / Research)  |           |                 |
|---|-----------|-----------------|
| Course Code   | 22AIINT83 | CIE: 100        |
| Credits   | 10        | SEE: 00         |
| Course Type   | INT       |                 |
| Number of Lecture Hours/Week (L-T-P)  | 0-0-12    | Total Marks:100 |
| <b>Course Objectives:</b> <ul style="list-style-type: none"> <li>Facilitate opportunities to enhance and apply advanced technical and managerial skills in real-time scenarios, preparing students to become industry-ready professionals.</li> <li>Expose students to cutting-edge technological developments in Artificial Intelligence, Machine Learning, Data Science, and related fields to ensure relevance in a rapidly evolving domain.</li> <li>Encourage the application of knowledge and experience gained during industrial internships or projects in classroom discussions to deepen conceptual understanding and critical thinking.</li> <li>Foster a research-driven academic environment that promotes curiosity, innovation, and the practical application of knowledge to real-world problems.</li> <li>Provide platforms for students to implement their expertise in real industrial use-cases, including model deployment, data engineering, and automation workflows.</li> <li>Train students in the effective communication of technical content through structured documentation and reporting of AI/ML models, experiments, and project outcomes.</li> <li>Introduce students to the ethical responsibilities of practitioners, emphasizing fairness, transparency, data privacy, and the societal impact of intelligent systems.</li> <li>Promote holistic development by integrating academic knowledge with career-focused learning and personal growth opportunities through mentorship, workshops, and capstone projects.</li> </ul> |           |                 |
| <b>Guidelines:</b> <ul style="list-style-type: none"> <li>The duration of the Internship shall be of 14-20 weeks.</li> <li>Internship must be completed in the VII/VIII semester.</li> <li>Students undergoing internship training are advised to report their progress and submit periodic progress reports to their respective guides</li> <li>The student must prepare and submit the hard copy of the final internship report along the internship certification provided by the industry.</li> </ul>   |           |                 |
