

About the Department: The Computer Science and Engineering department was started in the year 1984 with an intake of 40 students for UG. The department has seen phenomenal growth and now the department has increased UG intake to 240 students and offering two Post Graduation programmes: PG (Computer Science and Engineering with an intake of 18 students) and PG(Computer Network and Engineering with an intake of 09 students). The department is offering research program under its recognized research center. Computer Science and Design course was started from 2021 with an intake of 60 students. The department is having state- of-the-art computing facilities with high speed internet facilities and laboratories. The department library provides useful resources like books and journals. The department has well qualified and experienced teaching faculty. The department has been conducting several faculty development programs and student training programs.

Vision of the Institution

To be an institute of excellence in technical education and research to serve the needs of the industry and society at local and global levels.

Mission of the Institution

- To provide a high quality educational experience for students with values and ethics that enables them to become leaders in their chosen professions.
- To explore, create and develop innovations in engineering and science through research and development activities.
- To provide beneficial service to the national and multinational industries and communities through educational, technical, and professional activities.

Vision of the Department

• To become a premier department in Computer education, research and to prepare highly competent IT professionals to serve industry and society at local and global levels.

Mission of the Department

- To impart high quality professional education to become a leader in Computer Scienceand Engineering.
- To achieve excellence in Research for contributing to the development of the society.
- To inculcate professional and ethical behaviour to serve the industry.

Program Educational Objectives (PEO):

PEO1:	To prepare graduates with core competencies in mathematical and engineering fundamentals to solve and analyze computer science and engineering problems
PEO2:	To adapt to evolving technologies and tools for serving the society
PEO3:	To perform as team leader, effective communicator and socially responsible computer professional in multidisciplinary fields following ethical values
PEO4:	To encourage students to pursue higher studies, engage in research and to become entrepreneurs

Program Outcomes:

01. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

02. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

03. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

04. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

05. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

06. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

07. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

08. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

09. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one,,s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs):

PSO1:	Acquire competency in hardware and software working principles to analyze and solve computing problems.
PSO2:	Design quality software to develop scientific and business applications following Software Engineering practices.
PSO3:	Apply cutting edge technologies using modern tools to find novel solutions ethically to existing problems.

Module III Medium Access Control Sub-layer: Ethernet, Wireless LANS, Broadband Wireless, Bluetooth, Data link layer switching.	
 Install and configure network devices Switch. Use CISCO packet tracer to Build a Local Area Network of 4 to 6 nodes using switch. Build a Local Area Network of 4 to 6 nodes using hub and a switch andstudy the differences between repeater, hub and switch. identify broadcast and collision domain. Use wireshark to Examine Ethernet packets and ARP packets. 	08 Hrs
4. To study performance of CSMA/ CD protocol.	
Module IV The Network Layer: Network layer design issues, Routing Algorithms, Congestion control algorithms, Internetworking, The network layer in the internet.	
 Install and configure network devices Routers. Use CISCO packet tracer to Design and apply IP addressing scheme for a given topology Connect two or three LAN's via a router. Trace how routing happens viasimulation, and study the working of router. Design multiple subnets with suitable number of hosts Demonstrate static routing and dynamic routing for given topology Configure DHCP server Create subnets , Configure Host IP, Subnet Mask and Default Gateway in aLAN Configure RIP/OSPF. Use wireshark to Analyze IP Datagram and IP fragmentation received during the execution oftrace route command. Run ping command and examine ICMP packets using wireshark. 	08 Hrs
Module V	
The Transport Layer and Application Layer protocols: The transport services. Elements of transport protocols, The internet transport protocols: UDP The internet transport protocols: TCP, Electronic mail, The world wide web.	10 Hrs
 Use wireshark to Examine UDP and TCP ports and handshake segments Use packet tracer to configure DHCP server, SMTP server Implement Client Server Program in C/ Java. 	

Question paper pattern:

The question paper will have ten questions.

There will be 2 questions from each module, covering all the topics from a module.

The students will have to answer 5 full questions, selecting one full question from each module.

TEXT BOOKS:

- 1. Andrew S. Tanenbaum: Computer Networks, 5th Edition, Pearson, 2010.
- 2. Larry L. Peterson and Bruce S. Davie: Computer Networks A Systems Approach, 5th Edition, Elsevier, 2010.

Course outcomes:

	001	
Course Code	CO#	Course Outcome(CO)
	CO1	Describe embedded system and its classification.
	CO2	Illustrate the impact and challenges posed by IoT networks leading to new architectural models.
22CS552	CO3	Deployment of smart objects and the technologies to connect them to network and its protocols for efficient network communication.
	CO4	Describe the need for Data analytics and Security in IoT. Understand Arduino Board and programming and developing simple projects using Arduino UNO board.
	CO5	Explore Raspberry pi board and programming and develop simple projects using Raspberry pi and sensors.

 Course Objectives: To understand the Image fundamental and mathematical representations necessary for image processing. Understand the image enhancement techniques. To understand image enhancement techniques and filtering techniques. To adopt restoration and color image processing. Analyze segmentation techniques and image description approaches. 				
MODULES	5		Teaching Hours	
Module-I Digital Image Fundamentals: Introduction Examples of fields that use DIP, Fundame Processing, Image Sensing and Acquisition: im sensing element, image acquisition using sen using sensor arrays, a simple image formation r Quantization: basic concepts in sampling and q digital images, Some Basic Relationships betwo	11Hrs			
Module-II Image Enhancement in the Spatial Do transformations and spatial filtering, Some B Functions, Histogram Processing: Histogram Fundamentals of Spatial Filtering, Smoothin Spatial Filters.	11 Hrs			
Module-III				
Restoration: A model of the image degradation/restoration process, Noise models, Restoration in the Presence of Noise Only using Spatial Filtering.			10 Hrs	
Module–IV Image Segmentation : Fundamentals, point, line, edge detection: background, detection of isolated points, line detection, edge models: the image gradient and its properties, Thresholding: the basics of intensity thresholding, Applications of segmentation techniques to sample images.			10Hrs	
Module–V Color Image Processing and Image Representation: Color Fundamentals, color Models, Pseudo color Image Processing, Basics of Full-color Image Processing, Boundary Descriptors, Regional Descriptors.			10Hrs	
Question paper pattern: The question paper will have ten questions. There will be 2 questions from each module, c The students will have to answer 5 full questio module.	e	-		

Text Books:

1. *Gonzalez* and. Richard E. Woods' *Digital Image Processing*, Fourth Edition, Global Edition 2018.

Reference Books:

- 1. Digital Image Processing- S.Jayaraman, S. Esakkirajan, T. Veerakumar, TataMc Graw Hill 2014.
- 2. Digital Image Processing (with Matlab and Lab view), Vipul Singh, Elsiver. Filiplearning

Course outcomes: On completion of the course, the student will have the ability to:				
Course Code	CO#	Course Outcome(CO)		
	CO1	Describe the fundamentals concepts of digital image processing		
CO2 22CS62		Demonstrate the techniques for Image enhancement in Spatial and frequency domain.		
	CO3	Analyze Images restoration for noise removal.		
	CO4	Implement segmentation techniques and apply on real life problems		
	CO5	Adopt color image processing and apply representation approaches on given images.		

COURSE TITLE:CRYPTOGRAPHY AND INFORMATION SECURITY				
SubjectCode:22CS631	Credits:03	CIE:50		
Number of Lecture Hours/Week(L:T:P)	3:0:0Hrs	SEE:50		
Total Number of Lecture Hours	42 Hrs	SEEHours:03		
Prerequisites: Mathematics.				
 Course Objectives: To Gain knowledge of secure network architecture Explain the mathematics and theory behind different cryptographic algorithms. 				
MODUL		Teaching Hours
