22XXAE673		22XXAE674	
<p><b>PCC:</b> Professional Core Course, <b>PCCL:</b> Professional Core Course laboratory, <b>UHV:</b> Universal Human Value Course, <b>MC:</b> Mandatory Course (Non-credit), <b>AEC:</b> Ability Enhancement Course, <b>SEC:</b> Skill Enhancement Course, <b>L:</b> Lecture, <b>T:</b> Tutorial, <b>P:</b> Practical <b>S= SDA:</b> Skill Development Activity, <b>CIE:</b> Continuous Internal Evaluation, <b>SEE:</b> Semester End Evaluation. <b>K:</b> The letter in the course code indicates common to all the stream of engineering. <b>PROJ:</b> Project/Mini Project. <b>PEC:</b> Professional Elective Course. <b>PROJ:</b> Project Phase-I, <b>OEC:</b> Open Elective Course</p>			
<p><b>Professional Core Course (IPCC):</b> Refers to Professional Core Course Theory Integrated with practical of the same course. Credit for IPCC can be 04 and its Teaching-Learning hours (L : T : P) can be considered as (3 : 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper. For more details, the regulation governing the Degree of Bachelor of Engineering/Technology (B.E./B.Tech.) 2022-23</p>			
<p><b>National Service Scheme /Physical Education/Yoga:</b> All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE) (Sports and Athletics), and Yoga (YOG) with the concerned coordinator of the course during the first week of III semesters. Activities shall be carried out between III semester to the VI semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the degree. The events shall be appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, and Yoga activities. These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of degree.</p>			
<p><b>Professional Elective Courses (PEC):</b> A professional elective (PEC) course is intended to enhance the depth and breadth of educational experience in the Engineering and Technology curriculum. Multidisciplinary courses that are added supplement the latest trend and advanced technology in the selected stream of engineering. Each group will provide an option to select one course. The minimum number of students' strengths for offering professional electives is 10. However, this condition shall not be applicable to cases where the admission to the program is less than 10.</p>			
<p><b>Open Elective Courses:</b> Students belonging to a particular stream of Engineering and Technology are not entitled to the open electives offered by their parent Department. However, they can opt for an elective offered by other Departments, provided they satisfy the prerequisite condition if any. Registration to open electives shall be documented under the guidance of the Program Coordinator/Advisor/Mentor. The minimum number of students' strength for offering Open Elective Courses is 10. However, this condition shall not be applicable to class where the admission to the program is less than 10.</p>			
<p><b>Project Phase-I:</b> Students have to discuss with the mentor/guide and with their help he/she has to complete the literature survey and prepare the report and finally define the problem statement for the project work.</p>			

Course Title: <b>POWER ELECTRONICS</b>			
Course Code	22EE51	Credits: 04	CIE: 50
Number of Lecture Hours/Week	2hrs (Theory) 2 hrs (Tutorial)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b>			
1. Analog electronics 2. Knowledge of Electronic Circuit is needed			
<b>Course Objectives:</b>			
1. To study Power MOSFET's IGBT. 2. To understand Thyristors, GTOs and Commutation Techniques. 3. To know about AC Voltage Controllers & Controlled Rectifiers. 4. To understand the usage and Application of DC Choppers.			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b> <b>Power MOSFETs &amp; Insulated Gate Bipolar Transistors (IGBTs):</b> Power MOSFETs Junction Structure, Principle of Operation, Output Characteristics, Safe Operating Area (SOA), Gate Electrode Capacitance, Power MOSFET Switching Times. <b>Insulated Gate Bipolar Transistors (IGBTs):</b> IGBTs compared with power MOSFETs and power BJT, Junction Structure, Principle of Working, Terminal Capacitances, Gate Drive Requirements, and Switching Times.			<b>09 hrs</b>
<b>Module II</b> <b>Thyristors &amp; The Gate Turn Off Thyristor (GTO):</b> Thyristors Characteristics, Two-Transistor model of Thyristor, Turn-On and Turn-Off of Thyristor. Series operation of Thyristors, Parallel operation of Thyristors, di/dt Protection, dv/dt Protection. <b>The Gate Turn Off Thyristor (GTO),</b> Junctions Structures of Symmetrical and Anode Short GTO. GTO Switching characteristics.			<b>08 hrs</b>
<b>Module III</b> <b>Commutation Techniques &amp; AC Voltage Controllers:</b> Introduction, Natural commutation, Forced commutation, self commutation, impulse commutation. <b>AC Voltage Controllers:</b> Introduction, Principle of ON-OFF and Phase Control. Single-phase bidirectional controllers with resistive and inductive loads.			<b>08 hrs</b>
<b>Module IV</b> <b>Controlled Converters:</b> Introduction principle and operation of Phase controlled converter and operation. Single phase converters, Full converters. Three-phase full-wave converters. <b>PWM Inverters:</b> Introduction, principle of operation, performance parameters, single phase bridge inverters, voltage control of single phase inverters, Three phase inverter (120 and 180 degree conduction mode only)			<b>09 hrs</b>
<b>Module V</b> <b>DC Choppers:</b> Introduction, principle of step-down and step-up chopper with R and R-L load, Performance parameters. Chopper classification.			<b>08 hrs</b>
<b>Question paper pattern:</b>			
Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			

Course Title: <b>MICROCONTROLLERS</b>			
Course Code	22EE52	Credits:04	CIE: 50
Number of Lecture Hours/Week	3 hrs.(Theory) + 2hrs (Practical)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b>			
1. Knowledge of Digital Electronics subject is required 2. Knowledge of Microprocessors and its applications.			
<b>Course Objectives:</b>			
1. To study architecture of 8051 family. 2. To understand about instruction and programming. 3. To know about different types of interrupts. 4. To study I/O port interfacing. 5. To understand interfacing of external memory and 8255.			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			<b>09 Hours</b>
<b>Introduction:</b> Overview of 8051 family, Architecture, Addressing modes, Registers, External Memory. <b>Instructions and Programming:</b> Arithmetic, Logic, Single bit, Jump and Call instructions and Programming.			
<b>Module II</b>			<b>09 Hours</b>
<b>Interrupts:</b> Counters and Timers, 8051 Interrupts, Timer interrupts, External hardware interrupts, Serial communication interrupts and Interrupts priority and its Programming.			
<b>Module III</b>			<b>08 Hours</b>
<b>I/O Port Interfacing:</b> I/O programming, ADC, DAC, LCD, Stepper motor, Keyboard Interfacing.			
<b>Module IV</b>			<b>08 Hours</b>
<b>Interfacing to External Memory:</b> Semiconductor memory, Memory address decoding, Interface with External ROM, Data memory space.			
<b>Module V</b>			<b>08 Hours</b>
<b>Interfacing to the Program Peripheral Interface:</b> 8255 Modes, Interfacing and its programming. <b>Arm 64-Bit Microcontroller:</b> Thumb-2 technology and application of ARM, Architecture of ARM, various units of Architecture, debugging techniques, registers and interrupts.			
<b>Question paper pattern:</b> Two questions from each module will be set. The student has to answer five full questions, selecting at least one full question from each module.			
<b>Reference Books:</b>

Ayala: The 8051 Microcontroller Architecture, Programming and Application, 2E, Pen Ram International, 1991. 3. Predko: Programming and Customizing the 8051 Microcontroller” TMH, 2008. 4. Raj Kamal: Microcontroller: Architecture, Programming Interfacing and Systems Design” Pearson Education,2009.			

5. Andrew N. Sloss, Dominic Symes, Chris Wright, "ARM Systems Developer's Guides- Designing & Optimizing System Software", 2008, Elsevier

**Course outcomes: On completion of the course, the student will have the ability to:**

Course Code	CO	Course Outcome (CO)	
22EE52	CO1	Describe the architecture and operation of 8051 microcontroller	
	CO2	Apply the knowledge of instruction set & addressing modes for writing programs	
	CO3	Use of timer & Interrupts through programs	
	CO4	Discuss the different applications such as ADC, DAC, LCD & develop the programs for interfacing.	
	CO5	Use I/O ports for memory interfacing	
	CO6	Develop the program and interfacing of 8255

Course Title: <b>POWER SYSTEM ANALYSIS AND STABILITY</b>			
Course Code	<b>22EE53</b>	Credits:04	CIE: 50
Number of Lecture Hours/Week	<b>4hrs. (Theory)</b>		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
Prerequisite: Knowledge of Power Generation, Transmission and Distribution Knowledge of Electrical Machine is needed			
Course Objectives:			
<ol style="list-style-type: none"> <li>1. To study power system network with its basic knowledge.</li> <li>2. To analyse different types of faults and short circuit studies in power system network.</li> <li>3. To Calculate balanced and unbalanced load in Power system network.</li> <li>4. To understand the concept of stability in power system engineering</li> </ol>			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b> <b>Representation of Power System Components:</b> Circuit models of transmission line, synchronous machines, transformer on load, single line diagram, calculation of per unit quantities and per unit impedance and reactance diagram, advantages of P.U system, change in base quantities.			<b>8Hrs</b>
<b>Module II</b> <b>Symmetrical Three Phase faults:</b> Short circuit on unloaded transmission line, short-circuit currents and the reactance of synchronous machines on no load and load condition, current oscillograms. Analysis of short circuits, Selection of Circuit Breakers.			<b>8Hrs</b>
<b>Module III</b> <b>Symmetrical Components:</b> Resolution of unbalanced phase into their symmetrical components & vice versa, phase shift of symmetrical components through star - delta transformer. Power invariance. Analysis of balanced and unbalanced load using balanced and unbalanced three phase supply. Sequence impedances, sequence networks of power system elements. (Alternator, transformer and transmission line) positive, negative and zero sequence networks of power system elements.			<b>8Hrs</b>
<b>Module IV</b> <b>Unsymmetrical Faults:</b> Single line to ground (L-G), line to line (L-L), Double line to Ground (L-L-G) faults on unloaded alternator with and without fault impedance. Unsymmetrical faults on a power system with and without fault impedance. Open conductor faults in power systems.			<b>9Hrs</b>
<b>Module V</b> <b>Stability Studies:</b> Rotor dynamics and the swing equation of synchronous machine, constant M and H of rotating machines, Power angle equation, Stability studies, steady state stability and pull out curve. Transient stability, dynamic stability, equal-area criterion of stability studies and its applications, factors affecting on stability.			<b>9Hrs</b>
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.

Course Title: <b>UTILIZATION OF ELECTRICAL POWER</b>			
Course Code	22EE 55A	Credit:3	CIE: 50
Number of Lecture Hours/ Week	3hrs. (Theory)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b>			
1. Knowledge of Physics. 2. Knowledge of Electrical Machines.			
<b>Course Objectives:</b>			
1. To study Electric Heating. 2. To understand Illumination. 3. To know Electrolytic Process. 4. To understand Power Factor Considerations 5. To Get an Exposure about Electric traction and hybrid Vehicles.			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			
<b>Heating and Electrolytic process:</b> Different methods of Electric heating and their advantages, Resistance heating, Resistance ovens, Induction heating, Arc furnace. Fundamental principles of Electrolysis process, Extraction, refining of metals, Electroplating, Factors effecting electro deposition process.			<b>09 hrs</b>
<b>Module II</b>			
<b>Illumination:</b> Introduction, Radiant energy, Definitions, Laws of illumination, Polar curves, Photometry, Energy radiation and luminous efficiency, lighting calculations, Factory lighting, Flood lighting, street lighting. <b>Lamps:</b> Construction and working of Incandescent, Fluorescent, Mercury vapor, sodium vapor lamps, CFL and LED.			<b>08 hrs</b>
<b>Module III</b>			
<b>Power Tariffs:</b> Electric Tariff, Types, Domestic and Non –Domestic prevailing tariffs and their structures. Introduction to Availability-Based Tariff (ABT). <b>Power Factor and its Improvement:</b> Causes, disadvantages and improvement of Low Power Factor (LPF), Economic aspects.			<b>08 hrs</b>
<b>Module IV</b>			
<b>Electric Traction:</b> Introduction to traction system, requirement of an ideal traction system, supply system for electrical traction, Motors for Electric traction, Speed- Time curves for train movement. <b>Electrical Braking:</b> Introduction, and types of braking, Regenerative braking with three phase induction motors, Braking with single phase series motors, Magnetic track brake, and Electro-Mechanical Drum brakes.			<b>09 hrs</b>
<b>Module V</b>			
<b>Electric Vehicle:</b> Introduction to Electric vehicle, components of electric vehicle. Overview of charging, motors, and Storage of Electric Vehicle. <b>Hybrid Electric Vehicles:</b> Introduction, Concept and working of Hybrid Electric Drive trains. <b>Electric Drive-trains:</b> Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.			<b>08 hrs</b>

**Question paper pattern:** Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.

**Reference Books:**

**Course outcomes: On completion of the course, the student will have the ability to:**

Course Code	CO	Course Outcome (CO)
22EE55A	CO1	Describe the heating methods and electrolysis process
	CO2	Define the laws of illumination and compute the illumination for specified applications.
	CO3	Discuss the causes, disadvantages and methods of improving, low power factor.
	CO4	Classify the power tariffs.
	CO5	Describe electric traction and hybrid vehicles

Course Title: <b>RESEARCH METHODOLOGY &amp; INTELLECTUAL PROPERTY RIGHTS</b>		
Course Code	22RMI57	CIE: 50
Credits	<b>03</b>	SEE: 50
Course Type	Theory	Total Marks : 100
Lecture Hours/Week (L-T-P)	2-2-0-0	
Total Hours	28 Hours	SEE: 3 Hrs
<p><b>Course Objectives:</b>            CO1: To Understand the knowledge on basics of research and its types.            CO2: To Learn the concept of defining research problem and Literature Review, Technical Reading.            CO3: To learn the concept of attributions and citation and research design.            CO4: Concepts, classification, need for protection, International regime of IPRs - WIPO , TRIPS, Patent -Meaning, Types, surrender, revocation, restoration, Infringement , Procedure for obtaining Patent and Patent Agents.            CO5: Meaning, essential requirements, procedure for registration and Infringement of Industrial Designs, Copyright.</p>		
<b>Modules</b>		<b>Teaching Hours</b>
<b>Module-1</b>		
<p><b>Introduction:</b> Meaning of Research, Objectives of Engineering Research, and Motivation in Engineering Research, Types of Engineering Research, Finding and Solving a Worthwhile Problem. Ethics in Engineering Research, Ethics in Engineering Research Practice, Types of Research Misconduct, Ethical Issues Related to Authorship.</p>		<b>06 hrs</b>
<b>Module II</b>		
<p><b>Defining the research problem</b> - Selecting the problem. Necessity of defining the problem Techniques involved in defining the problem- Importance of literature review in defining a problem Literature Review and Technical Reading, New and Existing Knowledge, Analysis and Synthesis of Prior Art Bibliographic Databases, Web of Science, Google and Google Scholar,  <b>Effective Search:</b> The Way Forward Introduction to Technical Reading Conceptualizing Research, Critical and Creative Reading, Taking Notes While Reading, Reading Mathematics and Algorithms, Reading a Datasheet.</p>		<b>06hrs</b>
<b>Module III</b>		
<p><b>Research design and methods</b> - Research design - Basic principles. Need of research design Features of good design- Important concepts relating to research design - Observation and Facts  <b>Attributions and Citations:</b> Giving Credit Wherever Due, Citations: Functions and Attributes, Impact of Title and Keywords on Citations, Knowledge Flow through Citation, Citing Datasets, Styles for Citations, Acknowledgments and Attributions, What Should Be Acknowledged, Acknowledgments in, Books Dissertations, Dedication or Acknowledgments.</p>		<b>06hrs</b>
<b>Module - IV</b>		
<p><b>Basic Concepts of Intellectual Property (IP),</b> Classification of IP, Need for Protection of IP, International regime of IPRs - WIPO , TRIPS.  <b>Patents:</b> Meaning of a Patent – Characteristics/ Features . Patentable and Non-Patentable Invention. Procedure for obtaining Patent. Surrender of Patent, revocation &amp; restoration</p>		<b>05 hrs</b>

<p>of Patents, Infringement of Patents and related remedies (penalties) . Different prescribed forms used in Patent Act. Patent agents qualifications and disqualifications Case studies on patents - Case study of Neem patent, Curcuma(Turmeric)patent and Basmati rice patent, Apple inc.v Samsung electronics co.Ltd</p>	
<p style="text-align: center;"><b>Module - V</b></p> <p><b>Industrial Design:</b> Introduction to Industrial Designs. Essential requirements of Registration. Designs which are not registerable, who is entitled to seek Registration, Procedure for Registration of Designs Copy Right Meaning of Copy Right. Characteristics of Copyright. Who is Author, various rights of owner of Copyright. Procedure for registration. Term of copyright, Infringement of Copyright and Its remedies. Software Copyright.</p>	<b>05 hrs</b>
<p><b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.</p>	
<p><b>Assessment Details(both CIE and SEE)</b>  The weight age of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.</p> <p><b>Continuous Internal Evaluation:</b>  Three Unit Tests each of 20Marks(duration 01hour)  1.First test at the end of 5th week of the semester  2.Second test at the end of the 10th week of the semester  3.Third test at the end of the15th week of the semester. Two assignments each of 10Marks  4.First assignment at the end of 4th week of the semester  5. Second assignment at the end of 9th week of the semester Group discussion/Seminar/ quiz any one of three suitably planned to attain the Cos and Pos for 20 Marks (duration 01hours)  6.At the end of the 13th week of the semester.The sum of three tests, two assignments, and quiz/seminar/group discussion will be out of 100 marks and will be scaled down to 50marks (to have less stressed CIE, the portion of the syllabus should not be common /repeated for any of the methods of the CIE. Each method of CIE should have a different syllabus portion of the course). CIE methods/question paper is designed to attain the different levels of Bloom’s taxonomy as per the Outcome defined for the course.</p> <p><b>Semester End Examination:</b>  Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the subject (duration 03 hours)  1. The question paper will be set for 100marks.Marks scored shall be proportionally reduced to50 marks  2. The question paper will have ten questions. Each question is set for 20marks.  3. There will be 2questions from each module .Each of the two questions is under a module (with a maximum of 2 sub-questions).  4. The students have to answer 5 full questions, selecting one full question from each module. Marks scored by the students will be proportionally scaled down to 50marks</p> <p><b>Course Outcomes</b>  At the end of the course the student will be able to:  CO1.To know them leaning of engineering research.  CO2.To know the defining of research problem and procedure of Literature Review.  CO3.To know the Attributions and Citations and research design.  CO4. Highlights the basic Concepts and types of IPRs and Patents  CO5.Analyse and verify the procedure for Registration of Industrial Designs &amp; Copyrights.</p>

Course Title: <b>OPERATIONAL AMPLIFIERS AND LINEAR IC'S</b>			
Course Code	22EE55B	Credits:03	CIE: 50
Number of Lecture Hours/Week	3hrs (Theory)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b> Knowledge of Analog and digital electronics is required.			
<b>Course Objectives:</b>			
<ol style="list-style-type: none"> <li>1. To study op-amp &amp; AC Amplifiers</li> <li>2. To know about Op-Amp Frequency Response and Compensation</li> <li>3. To understand about Signal Processing Circuits and Op-amp Nonlinear Circuits.</li> <li>4. To study Multivibrator &amp; Signal Generator.</li> <li>5. To study Active Filter &amp; Voltage Regulators.</li> </ol>			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			
<b>Basics of OP-amps and AC Amplifiers:</b> Basics of op-amp (Introduction, Block diagram & Characteristics), capacitor coupled voltage follower, High Zinc Capacitor coupled voltage follower, capacitor coupled Non-inverting amplifier, High Zinc capacitor coupled Non-inverting amplifier, Capacitor coupled inverting amplifier, setting upper cutoff frequency, capacitor coupled Difference amplifier, use of single polarity supply.			<b>9 Hrs</b>
<b>Module II</b>			
<b>Op-amps Frequency Response and Compensation:</b> Op-amp circuit stability, frequency and phase response, frequency compensating methods, op-amp circuit bandwidth, slew rate effects, stray capacitance effects, load capacitance effects, circuit stability precautions.			<b>8 Hrs</b>
<b>Module III</b>			
<b>Signal Processing Circuits and Op-amps Nonlinear Circuits :</b> Precision half wave and full wave rectifiers, limiting circuits, clamping circuits, peak detectors, Sample and Hold circuit, Crossing detectors, Inverting Schmitt trigger circuit, Non- inverting Schmitt circuits.			<b>8 Hrs</b>
<b>Module IV</b>			
<b>Multivibrator &amp; Signal generator:</b> Astable multivibrator, Monostable multivibrator. Triangular/Rectangular wave generator, waveform generator design, phase shift oscillator, oscillator amplitude stabilization, Wein bridge oscillator, amplitude stabilization.			<b>8 Hrs</b>
<b>Module V</b>			
<b>Active filters &amp; DC Voltage regulators:</b> First and second order, high pass , low pass, Band pass and Band stop filters. Basics of Voltage regulator, voltage follower regulator, adjustable o/p regulator, precision voltage regulator, IC LM723.			<b>9 Hrs</b>
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			
<b>Reference Books:</b>			
<ol style="list-style-type: none"> <li>1. Operational Amplifiers and Linear IC's by David A. Bell, PHI, Second Edition, 2008</li> <li>2. Operational Amplifiers and Linear IC's by Ramakanth PHI Pearson 4<sup>th</sup> Edition, 2004</li> </ol>			

3. Linear integrated circuits by Roy Choudary, New Age International second edition, 2004.			
4. Operational Amplifiers with linear integrated circuit by Stanley William D, Pearson Education, Fourth Edition, 2009.			
<b>Course outcomes: On completion of the course, the student will have the ability to:</b>			
Course Code	CO	Course Outcome (CO)	
22EE55B	CO1	Describe the basics of Op-Amps	
	CO2	Calculate the frequency response of Op-Amps and Identify compensation methods of op-amp	
	CO3	Illustrate different types of signal processing circuit and Non-linear circuits	
	CO4	Design different types of multivibrator and signal generators	
	CO5	Identify and Illustrate the active filters and DC voltage regulators

<b>Course Title: Reactive Power Management</b>			
Course Code	22EE55C	Credits:3	CIE: 50
Number of Lecture Hours/Week	<b>3Hrs (Theory)</b>		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b> Knowledge of Electric power generation, transmission and distribution system and utilization.			
<b>Course Objectives:</b>			
<ol style="list-style-type: none"> <li>1. Students will learn different methods of load compensation.</li> <li>2. Students will understand reactive power compensation in transmission system under steady state.</li> <li>3. Students will understand reactive power coordination and their problems</li> <li>4. Students will understand DSM and DSRM methods.</li> <li>5. Students will understand USRM and reactive power management in other utility sectors.</li> </ol>			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module-I</b>			<b>08 Hrs</b>
<b>Load Compensation:</b> Objectives and specifications, reactive power characteristics, inductive and capacitive approximate biasing, Load compensator as a voltage regulator, phase balancing and power factor correction of unsymmetrical loads.			
<b>Module-II</b>			<b>09 Hrs</b>
<b>Steady – State Reactive Power Compensation in Transmission System:</b> Uncompensated line, types of compensation, Passive shunt and series and dynamic shunt compensation, examples Transient state reactive power compensation in transmission systems: Characteristic time periods, passive shunt compensation, static compensations, series capacitor compensation, compensation using synchronous condensers.			
<b>Module-III</b>			<b>08 Hrs</b>
<b>Reactive Power Coordination:</b> Objective, Mathematical modeling, Operation planning, transmission benefits, Basic concepts of quality of power supply, disturbances, steady –state variations, effects of under voltages, frequency, Harmonics, radio frequency and electromagnetic interferences.			
<b>Module-IV</b>			<b>09 Hrs</b>
<b>Demand Side Management:</b> Load patterns, basic methods load shaping, power tariffs, KVAR based tariffs penalties for voltage flickers and Harmonic voltage levels.			
<b>Distribution side Reactive power Management:</b> System losses, loss reduction methods, examples, Reactive power planning, objectives, Economics Planning capacitor placement, retrofitting of capacitor banks.			
<b>Module-V</b>			<b>08 Hrs</b>
<b>User Side Reactive Power Management:</b> KVAR requirements for domestic appliances, Purpose of using capacitors, selection of capacitors, deciding factors, types of available capacitor, characteristics and Limitations.			
<b>Reactive power management in electric traction systems and are furnaces:</b>			

Typical layout of traction systems, reactive power control requirements, distribution transformers, Electric arc furnaces, basic operations, furnaces transformer, filter requirements, remedial measures, power factor of an arc furnace.		
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.		
Text Books: 01. Reactive power control in Electric power systems by T.J.E. Miller, John Wiley and sons, 1982. 02. Reactive power Management by D. M. Tagare, Tata McGraw Hill, 2004.		
<b>Reference Books:</b> 01. Reactive Power Compensation: A Practical Guide, Wolfgang Hofmann, Jurgen Schlabbach, Wolfgang Just, Wiley publication 2012. 02. Reactive Power Compensation, Dr. Hidaia Mahmood Alassouli, Notion Press, 2020		
<b>Course outcomes:</b> <b>On completion of the course, the student will have the ability to:</b>		
<b>Course Code</b>	<b>CO</b>	<b>Course Outcome (CO)</b>
22EE55C	CO1	Distinguish the importance of load compensation in symmetrical as well as unsymmetrical loads
	CO2	Observe various compensation methods in transmission lines
	CO3	Construct model for reactive power coordination
	CO4	Distinguish demand side reactive power management & user side reactive power management
	CO5	Observe various compensation methods for electric traction and other electric utility sectors

Course Title: <b>DIGITAL SIGNAL PROCESSING</b>			
Course Code	22EE55D	Credits:3	CIE: 50
Number of Lecture Hours/Week	3hrs (Theory)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b> 1. Knowledge of signals and systems is needed 2. Knowledge of Digital Electronics is needed.			
<b>Course Objectives:</b> 1. To study Discrete Fourier Transforms. 2. To understand Fast Fourier Transforms Algorithms. 3. To know Realization of Digital Systems 4. To Design IIR and FIR Digital Filters.			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b> <b>Discrete Fourier Transforms:</b> Introduction, properties-linearity, shift symmetry periodic convolution, circular convolution, linear convolution.			<b>08 hrs</b>
<b>Module II</b> <b>Fast Fourier Transforms Algorithms:</b> Introduction decimation in time algorithm, decimation in frequency algorithm, decomposition for N a composite numbers, calculation of numbers of computations, and computational efficiency.			<b>07 hrs</b>
<b>Module – III</b> <b>Realization of Digital Systems:</b> Introduction, block diagrams and signal Flow graphs, matrix representation, realization of IIR systems-direct form, cascade form, parallel form realization of FIR systems-direct form, cascade form and linear phase realization.			<b>08 hrs</b>
<b>Module IV</b> <b>Design of IIR Digital Filters:</b> Introduction, Impulse Invariant, bilinear transformation and approximation of derivative, all pole analog filters Butterworth, chebyshev and Elliptic filters, frequency transformations.			<b>10 hrs</b>
<b>Module V</b> <b>Design of FIR Digital Filters:</b> Introduction, symmetric /Asymmetric FIR filters and linear phase property windowing, rectangular hamming, hamming windows, frequency sampling technique.			<b>08 hrs</b>
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			
<b>Reference Books:</b> 1. Digital signal processing: Principle, algorithms and application By Proakis, Pearson Education/ PHI. 2. Digital signal processing by Oppenheim's Pearson Education/PHI 3. Digital signal processing by Feachor Emmauel, Pearson Education. 4. Digital signal processing by J.S. Chitthode. Technical publishers, Pune			
<b>Course outcomes: On completion of the course, the student will have the ability to</b>			
<b>Course Code</b>	<b>CO</b>	<b>Course Outcome (CO)</b>	
	CO1	Illustrate discrete Fourier transformation and FFT	

22EE55D	CO2	Interpret the different types of realization of digital systems	
	CO3	Illustrate different types of IIR and FIR filters	
	CO4	Analyze the IIR and FIR filters	
	CO5	Design of FIR and IIR filters

<b>Course Title: COMPUTER APPLICATIONS TO POWER SYSTEMS</b>		
<b>Course Code</b>	22EE62	<b>CIE: 50</b>
<b>Number of Lecture Hours/Week</b>	03 hrs.(Theory) + 02hrs (Tutorial)	<b>SEE: 50</b>
<b>Total Number of Lecture Hours</b>	<b>42</b>	<b>SEE Hours: 03</b>
	<b>Credits</b>	<b>04</b>
<b>Prerequisite:</b>		
<ol style="list-style-type: none"> <li>1. Electrical Power Transmission and Distribution System.</li> <li>2. Power System Stability and Analysis.</li> </ol>		
<b>Course Objectives:</b>		
<ol style="list-style-type: none"> <li>1. To Study the different methods of Admittance bus of power system networks.</li> <li>2. To understand different types of buses and its analysis using load flow study.</li> <li>3. To Study and analysis of transient stability systems.</li> <li>4. To understand economic concept of power systems.</li> <li>5. To Study of different voltage control method for power systems.</li> </ol>		
<b>Modules</b>		<b>Teaching Hours</b>
<b>Module I</b>		
<b>Formation of Y-Bus of a power system network by direct inspection method incidence matrices:</b> Element node incidence matrix, Bus incidence matrix, Primitive network in impedance & admittance form, primitive {y} matrix. Formation of Y-bus by singular transformation method, Algorithm for formation of bus impedance matrix [z] on single phase basis.		<b>08hrs</b>
<b>Module II</b>		
<b>Load flow studies:</b> Types of buses, operating constraints, Classification of system variables load flow equations, solution of load flow equations by Gauss-Seidel method, and Newton Raphson method, Acceleration of convergence LF solution by Fast-decoupled method. Comparison of LF methods, Representation of tap changing & phase shifting transformer.		<b>09hrs</b>

<b>Module III</b>	
<b>Transient Stability Study:</b> Swing equation representation of synchronous machine for transient stability studies, load representation network performance equation, solution Techniques with flow charts. Transient stability solution by numerical solution of differential equations, modified Euler's method, Runge-Kutta 4th order method.	<b>08hrs</b>

<b>Module IV</b>	
<b>Economic Operation of Power Systems.</b> Performance curves, load sharing between the units within plants, load sharing between plants including transmission losses. Penalty factor, Derivation of transmission loss formula and loss coefficient, hydrothermal constraints.	<b>08hrs</b>

<b>Module V</b>	
<b>Automatic Generation &amp; Voltage control:</b> Automatic load frequency control (ALFC) and Automatic voltage regulator (AVR), loop diagrams Automatic load frequency control for fly ball governing system Generator model. Load model, turbine model. governor model complete ALFC Block diagrams steady state and dynamic response of ALFC loops single area and two area block diagram representation.	<b>09hrs</b>

**Question paper pattern:** Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.

**Reference Books:**

<b>Course Title: SIGNALS AND SYSTEMS</b>			
<b>Course Code</b>	22EE63A	Credits:3	CIE: 50
<b>Number of Lecture Hours/Week</b>	3hrs (Theory)		SEE: 50
<b>Total Number of Lecture Hours</b>	42		SEE Hours: 03
<b>Prerequisite:</b>			
1. Knowledge of basic Analog signals is needed 2. Knowledge of Laplace transformation, Solutions of Differential equations			
<b>Course Objectives:</b>			
1. To study Definitions classification and basic operation of signals. 2. To understand time-domain representation for LTI systems. 3. To know Fourier series representation. 4. To study Fourier and Z transformation and their applications.			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			<b>08 hrs</b>
<b>Introduction:</b> Definitions of signal and system, classification of signals, basic operations on signals, elementary signals, and systems viewed as interconnections of operations, properties of systems.			
<b>Module II</b>			<b>08 hrs</b>
<b>Time Domain Representations for LTI System:</b> Convolution, impulse representation, properties of impulse response representation, differential and difference equation representations, and block diagrams representation.			
<b>Module III</b>			<b>08 hrs</b>
<b>Fourier Series Representation for Signals:</b> Introduction, Fourier representations for four signal classes, orthogonality of complex sinusoidal signals, DFTS representations, continuous-time –series representations.			
<b>Module IV</b>			<b>10 hrs</b>
<b>Fourier Transformations and Applications of Fourier Representations:</b> DTFT representations, properties of representations. Frequency response of LTI systems, solution, of differential and difference equation using system function, Fourier transform representations for periodic signals, sampling of continuous time signals and signal reconstruction.			
<b>Module V</b>			<b>08 hrs</b>
<b>Z-Transforms:</b> Introduction, Z- transform, properties of ROC, properties Z- transform, inverse transformation, analysis of LTI systems, transfer function, stability and causality, unilateral Z-transform and its application to difference equation.			
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			
<b>Reference Books:</b>

Course Title: <b>ESSENTIALS OF INFORMATION TECHNOLOGY</b>			
Course Code	22EEOE641	Credits:3	CIE: 50
Number of Lecture Hours/Week	3 hrs.(Theory)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite: Knowledge of Computer Organization, operating system and Computer language.</b>			
<b>Course Objectives :</b>			
<ol style="list-style-type: none"> <li>1. To study basic of Computer Systems.</li> <li>2. To understand about different types of Operating System concepts.</li> <li>3. To know about Problem Solving Techniques.</li> <li>4. To understand Programming basics.</li> <li>5. To study structured programming and RDBMS data processing.</li> </ol>			
<b>Modules</b>			<b>Teaching Hours</b>
<p style="text-align: center;"><b>Module I</b></p> <p><b>Introduction to Computer Systems:</b> Basic of computer systems-various hardware components, Data storage and various memory units, Central processing units, Execution cycle, Introduction to software and its classifications.</p> <p><b>Operating System Concepts:</b> Introduction, Memory management, Process management, Inter-process communication, Deadlocks, File management, Device management.</p>			<b>09 Hours</b>
<p style="text-align: center;"><b>Module II</b></p> <p><b>Problem Solving Techniques:</b> Introduction to problem solving, Computational problem and its classification, Logic and its types. Introduction to Algorithms, implementation of algorithms using flowcharts, Implementation through RAPTOR tool searching and sorting algorithms. Introduction and classification to Data structures – Basic data structures, Advanced data structures.</p>			<b>09 Hours</b>
<p style="text-align: center;"><b>Module III</b></p> <p><b>Programming Basics:</b> Introduction to programming paradigms and pseudo code, Basic Programming concepts, Program life cycle, Control structures, Introduction and demonstration of 1-D array and 2-D array, Searching and Sorting techniques, Demonstration concept of memory reference in arrays, strings, and compiler concepts – code optimization techniques.</p>			<b>08 Hours</b>
<p style="text-align: center;"><b>Module IV</b></p> <p><b>Structured Programming:</b> Functions, Structures, File handling, Introduction to software Development life cycle, Industry coding standards and best practices, Testing and debugging code review.</p>			<b>08Hours</b>
<p style="text-align: center;"><b>Module V</b></p> <p><b>RDBMS – Data Processing:</b> The Database technology models, ER modeling concept, notations, extended ER features, Logical database design, Normalization, SQL – DDL statement, DML statements, DCL statements, Joins, Sub queries, Views, Database design issues.</p> <p><b>Project:</b> Project briefing, Introduction to Embedded SQL, Project contact sessions and project evaluation.</p>			<b>08 Hours</b>
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			

Title	<b>Power Systems Simulation Lab</b>	<b>Credits: 01</b>
Course Code	<b>22EEL66</b>	CIE: 50
Number of Lecture Hours/Week	<b>2hrs.(Practical)</b>	SEE: 50
Total Number of Lecture Hours	14 hrs	SEE Hours: 03
<b>Modules</b>		<b>Teaching Hours</b>
<b>MATLAB</b>		
1. MATLAB fundamentals, matrices, Vectors, matrix and array operations. 2. Using built in functions, saving and loading data, script files. 3. Function files, language specific features much as loops, branches and control flow.		
<b>Power system simulation using MATLAB, software packages and C++</b> 1. i) Y-Bus formation for systems with and without mutual coupling, by singular transformation and inspection method. ii) Determination of Bus currents, bus power & line flows for a specified system voltage bus profile. 2. ABCD parameters i) Formation for symmetric $\pi/T$ configuration ii) Verification of $AD-BC=1$ III) Determination of efficiency and regulation 3. Determination of power angle diagrams for salient and nonsalient pole synchronous machines, reluctance power, excitation emf and regulation. 4. To determine fault currents and voltages in a single transmission line system with star-delta transformers, at a specified location for SLGF, DLGF, and LLF. 5. To determine fault curve i) swing curve ii) critical clearing time for a single machine connected to infinite bus through a pair of identical transmission lines. for a 3-phase on one of the lines for variation of inertia constant/line parameters/fault location/prefault electrical output. 6. Load flow analysis for a 3 Bus system using Gauss Seidal method for at least 3 iterations (Y-bus to be given as data) 7. Formation of jacobian for a system not exceeding 4 buses (no PV buses) in polar coordinates. 8. For a given power system, computation of Jacobian to conduct load flow analysis using Newton Raphson method (no PV Buses) 9. Optimal generator scheduling for thermal power plants.

**Course outcomes:**

**On completion of the course, the student will have the ability to:**

Course Code	CO #	Course Outcome (CO)
21EEL66	CO1	Describe Power System tools of MATLAB, determine Y bus by using inspection and singular transformation.
	CO2	Determination of Bus Currents, Bus power and line flows for a specified power system networks.
	CO3	Determination of power angle diagrams for synchronous machines, find fault currents and voltages in a single transmission line system with star delta transformers.
	CO4	Load flow analysis for a power system network by using Gauss Seidal, Newton Raphson and fast decoupled load flow studies
	CO5	Determine optimal generator scheduling for thermal power plants

Course Title: <b>INDIAN KNOWLEDGE SYSTEMS</b> (As per Choice Based Credit System (CBSE) Scheme) (From the academic year 2024-25)		
Course Code	22EEAE671	CIE: 50
Credits	<b>01</b>	SEE: 50
Course Type	Theory	Total Marks : 100
Lecture Hours/Week (L-T-P)	1-0-0	
Total Hours	15 Hours	SEE: 2 Hrs
<b>Course Objectives:</b> The subjects will be able to: <ol style="list-style-type: none"> <li>Facilitate the students with the concept of Indian traditional knowledge and to make them understand the importance of roots of knowledge system.</li> <li>To make the students understand the traditional knowledge and analyse it and apply it to their day-to-day-life.</li> </ol>		
<b>Modules</b>		<b>Teaching Hours</b>
<b>Module I</b> <b>Introduction to Indian knowledge systems(IKS):</b> Overview, Vedic corpus, philosophy character scope and importance, traditional knowledge vis-à-vis indigenous knowledge, traditional knowledge V/s western knowledge.		<b>05 hrs</b>
<b>Module II</b> <b>Traditional knowledge in Humanities and sciences:</b> Linguistics, Number and measurements – Mathematics, chemistry, physics, art, astronomy, astrology and public administration, united nations sustainable development goals.		<b>05hrs</b>
<b>Module III</b> <b>Traditional knowledge in professional domain:</b> Town planning and architecture, construction, health wellness and psychology-medicine, agriculture, governance and public administration, united nations, sustainable development goals.		<b>05hrs</b>
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.

8	Total Marks for the Course	<b>50 Marks</b>	<b>50 Marks</b>

**Course outcomes:****At the end of the course, the student will be able to:**

Course Code	CO #	Course Outcome (CO)
	CO1	Provide an overview of the concept of the Indian knowledge system and its importance
	CO2	Appreciate the need and importance of protecting traditional knowledge.

	<b>CO3</b>	Recognize the relevance of traditional knowledge in different domains.
	<b>CO4</b>	Establish the significance of Indian knowledge systems in the contemporary world.

Course Title: <b>DISTRIBUTED GENERATION</b>			
Course Code	22EE63C	Credits:3	CIE: 50
Number of Lecture Hours/Week	3hrs (Theory)		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Prerequisite:</b> Basics of Mechanical Engineering, Basic Electrical Engineering			
<b>Course Objectives:</b>			
1. Knowledge of renewable energy sources 2. Introduce different DG Technologies			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			<b>9 hrs</b>
<b>DG:</b> An introduction: Electricity production, DG Technologies, Economic consideration, Environmental issues. <b>IC Engine - Generator sets:</b> IC Engine overview, past and present trends in engine development, Utilizing existing systems, Utility interaction, IC Stirling engine.			
<b>Module II</b>			<b>9 hrs</b>
<b>Gas turbines:</b> Basic types, recuperated Brayton cycle, modified gas turbine cycles, turbine performance, future developments of fuels. <b>PV system:</b> Semiconductor types, PV system efficiency and design, Technical developments and barriers, PV System Capacity, Credit.			
<b>Module III</b>			<b>9 hrs</b>
<b>Micro turbines:</b> Some features of single shaft MT, twin shaft MT, applications, performance improvements, Rankine cycle MT, challenges. <b>Fuel Cells:</b> Principles of operation, Types, Comparison, operating parameters, interconnection and control, Technology development and barriers.			
<b>Module IV</b>			<b>8 hrs</b>
<b>Principles of control of DG systems:</b> Control techniques, threshold control, Buy back priority, cooling / heating priority control, optional control, complete optimization, system modeling.			
<b>Module V</b>			<b>8 hrs</b>
<b>Economic &amp; Financial Aspects of DG:</b> Comparing present and future costs, the life cycle cost, economic evaluation criteria, optimization.			
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.

<b>Course Title: ELECTRIC VEHICLES</b>			
Course Code	22EE63B	Credits:3	CIE: 50
Number of Lecture Hours/Week	<b>3Hrs (Theory)</b>		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
<b>Pre-requisites:</b>			
1. Basics of Electrical and Electronics Engineering			
<b>Course Objectives:</b>			
<ul style="list-style-type: none"> <li>To develop basic schemes of electric vehicles and hybrid electric vehicles.</li> <li>To understand requirement of electric vehicle motors &amp; their control</li> <li>To Choose a suitable drive scheme for developing an electric vehicle depending on resources</li> <li>To Choose proper energy storage and charging systems for vehicle applications</li> </ul>			
<b>Modules</b>			<b>Teaching Hours</b>
<b>Module I</b>			<b>09 Hrs</b>
<b>Introduction to Electrical Vehicle (EV):</b> Past, Present & Feature of EV, Current Major Issues, Recent Development Trends, EV Concept, Key EV Technology, Social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. <b>Hybrid Electric Vehicle ( HEV):</b> Configuration of HEV (Series, Parallel, Series-parallel &Complex), Examples of HEV system performance, State-of-the Art EVs & HEVs, Comparison of EV Vs IC Engine.			
<b>Module II</b>			<b>08 Hrs</b>
<b>Electric Drive-trains:</b> Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.			
<b>Module III</b>			<b>08 Hrs</b>
<b>EV Motors:</b> Requirement of EV motors, Comparison of EV motors, Types of EV motors: <b>DC Motor</b> (Basics of DC Motor, Torque speed characteristics), <b>Induction Motor</b> (Rotating Magnetic Field, Basics of Induction motor, Speed-Torque Curve) and construction & working of <b>Switched reluctance Motors(SRM)</b> .			
<b>Module IV</b>			<b>09 Hrs</b>
<b>EV Storages:</b> <b>Battery parameters:</b> Cell and battery voltages, Charge capacity, Energy stored, Energy density, Specific power, charge efficiency, Energy efficiency, Self-discharge rates, Battery geometry, Battery temperature, heating and cooling needs, Battery life and number of deep cycles. <b>EV Batteries:</b> Lead Acid, Nickel-based, Sodium-based, Lithium and Metal Air Batteries, Ultra-Capacitors.			
<b>Module V</b>			<b>08 Hrs</b>
<b>EV Charging:</b> <b>Battery Chargers:</b> Charge equalization, Conductive (Basic charger circuits, Arrangement of an off-board conductive charger, Standard power levels of conductive chargers), Inductive (Principle of inductive charging, Soft-switching power converter for inductive charging), Battery indication methods. <b>Charging Infrastructure:</b> Domestic and Public Charging Infrastructures, Normal, Occasional and Fast Charging Stations, Battery Swapping Station, Move-and-charge zone.			
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.			
<b>Reference Books:</b>

<b>Course Title: Operation and Maintenance of Solar Electric Systems</b>		
Course Code	22EEOE642	CIE: 50
Number of Lecture Hours/Week	<b>3hrs.(Theory)</b>	SEE: 50
Total Number of Lecture Hours	42	SEE Hours: 03
Prerequisite: Basic electrical engineering.		
<b>Objectives:</b> To appreciate the importance of solar PV O & M. To assess the impact of O and M. To develop safety measures for Operation of solar PV system. To document the O and M procedures.		
<b>Modules</b>		<b>Teaching Hours</b>
<b>Module I</b> <b>Introduction To Solar PV Operation &amp; Maintenance (O&amp;M):</b> Necessity of O and M, Expected Outcome, Benefits of O&M. Overview of PV System Components, Types of Rooftop PV Systems, System Components. Maintenance Categorization, Scheduled Maintenance, Unscheduled Maintenance. Common Tools & Equipments Used, Testing Methods and Techniques		08 hrs
<b>Module II</b> <b>Photovoltaic Modules:</b> Inspection & Fault Identification, Dust accumulation, Module Shading , Module Mismatch, Physical Integrity. Maintenance & Troubleshooting, Basic Level, Advanced Level, Methods and Techniques for Shading Analysis, Key Points to Remember.		08 hrs
<b>Module III</b> <b>Inverters:</b> Inspection and Fault Identification, Classification of Solar Inverters, Routine Inspection. Maintenance and Troubleshooting, Basic Level, Advanced Level, Key Points to Remember.		08 hrs
<b>Module IV</b> <b>Balance Of Systems:</b> Inspection and Fault Identification, Cables, Protection Devices, Batteries. Maintenance and Trouble shooting , Basic Level, Advanced Level, Key points to Remember.		08 Hrs
<b>Module V</b> <b>Jobsite Safety:</b> General Safety Procedures, General safety, Specific safety, Personal Safety Procedures, Importance of Personal Protective Equipment , Major Safety Hazards, Key points to Remember. <b>Electricity Bill:</b> Calculation of consumption of electrical energy, Calculation of energy generated by RTPV system, Before and After Installation of Solar PV system. <b>Documentation:</b> Importance of Documentation and its significance,		10 hrs

System Documentation, Maintenance Documentation, Component Documentation.		
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.		
<b>Text books/Reference Books:</b> 01. Number of Lecture Hours/Week	<b>3hrs.(Theory)</b>		SEE: 50
Total Number of Lecture Hours	42		SEE Hours: 03
Prerequisite: Basic Terminologies of Electrical Engineering			
<b>Course Objectives:</b> <ol style="list-style-type: none"> <li>1. To provide an introduction to the fundamentals of illumination engineering and architectural lighting designs.</li> <li>2. To impart lighting fundamentals and measurements.</li> <li>3. To gain knowledge on illumination technology and their application in lighting systems.</li> <li>4. To design indoor and outdoor lighting systems.</li> </ol>			
Modules			Teaching Hours
<b>Module I</b> <b>Introduction of Light</b> : Types of illumination, Day lighting, Supplementary artificial lighting and total lighting, Quality of good lighting, Factors affecting the lighting-shadow, glare, reflection, Colour rendering and stroboscopic effect, Methods of artificial lighting, Lighting systems-direct, indirect, semi direct, semi indirect, Lighting scheme, General and localised			07 hrs
<b>Module II</b> <b>Measurement of Light</b> : Definition of luminous flux, Luminous intensity, Lumen, Candle power, Illumination, M.H.C.P, M.S.C.P, M.H.S.C.P, Lamp efficiency, Brightness or luminance, Laws of illumination, Inverse square law and Lambert's Cosine law, Illumination at horizontal and vertical plane from point source, Concept of polar curve, Calculation of luminance and illumination in case of linear source, round source and flat source			07 hrs
<b>Module III</b> <b>Design of Interior Lighting</b> : Definitions of maintenance factor, Uniformity ratio, Direct ratio, Coefficients of utilization and factors affecting it, Illumination required for various work planes, Space to mounting height ratio, Types of fixtures and relative terms used for interior illumination such as DLOR and ULOR, Selection of lamp and luminance, Selection of utilization factor, reflection factor and maintenance factor. Determination of Lamp Lumen output taking into account voltage and temperature variations, Calculation of wattage of each lamp and no of lamps needed, Layout of lamp luminaire, Calculation of space to mounting height ratio, Indian standard recommendation and standard practices for illumination levels in various areas, Special feature for entrance, staircase, Corridor lighting and industrial building			10 hrs
<b>Module IV</b> <b>Design of Outdoor Lighting</b> : Street Lighting : Types of street and their level of illumination required, Terms related to street and street lighting, Types of fixtures used and their suitable application, Various arrangements in street lighting, Requirements of good street lighting, Selection of lamp and luminaire, Calculation of their wattage, Number and arrangement, Calculation of space to mounting height ratio, Calculation of illumination level available on road. <b>Design of Outdoor Lighting</b> : Flood Lighting : Terms related to flood lighting, Types of fixtures and their suitable applications, Selection of lamp and projector, Calculation of their wattage and number and their arrangement, Calculation of space to mounting height ratio,			10 hrs

Recommended method for aiming of lamp		
<b>Module V</b> <b>Special Features of Aesthetic Lighting</b> : Monument and statue lighting, Sports lighting, Hospital lighting, Auditorium lighting Case Study: On Domestic, Commercial, Industrial and community service buildings.		08 hrs
<b>Question paper pattern:</b> Total ten questions will be asked. Two from each module. The student has to answer five questions, selecting at least one from each module.		
<b>Text books/Reference Books:</b> 1. D.C. Pritchard Lighting, Routledge, 2016 2. Jack L. Lindsey, Applied Illumination Engineering , PHI, 1991 3. John Matthews Introduction to the Design and Analysis of Building Electrical Systems, Springer, 1993 4. M.A. Cayless, Lamps and Lighting , Routledge, 1996		
<b>Course outcomes:</b> <b>On completion of the course, the student will have the ability to:</b>		
<b>Course Code</b>	<b>CO #</b>	<b>Course Outcome (CO)</b>
22EEOE644	<b>CO1</b>	<b>Outline the fundamentals of illumination engineering and architectural lighting designs.</b>
	<b>CO2</b>	<b>Describe lighting fundamentals and measurements.</b>
	<b>CO3</b>	<b>Design of indoor lighting</b>
	<b>CO4</b>	<b>Design of outdoor lighting</b>
	<b>CO5</b>	<b>Examine illumination technology and their application in lighting systems</b>

### Course Articulation Matrix for the Academic Year 2024-25
